

SUJITH MAKAM

AI/ML Engineer | Agentic AI Developer

+91 8555042700 | makamsujith2004@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Summary

AI/ML Engineer specializing in **Agentic AI** and multi-agent systems — designing, deploying and governing production LLM applications on Azure and AWS with Azure AI Foundry, CrewAI, Google ADK, RAG and Responsible-AI controls. Backed by four IEEE publications; delivers in Agile teams using Python, Git, Jira and Confluence.

Education

Indian Institute of Information Technology (IIIT), Dharwad

DEC 2021 - JULY 2025

B.Tech in Computer Science and Engineering

CGPA: 8.41

Technical Skills

AI/ML: Agentic AI, Multi-Agent Systems, Generative AI, LLMs, RAG, Prompt Engineering, AI Governance, Responsible AI, Conversational AI

AI Frameworks & Observability: Azure AI Foundry, Azure OpenAI, CrewAI, Google ADK, Agent Gateway, Langfuse, AgentOps, Cognigy, Genesys

Languages: Python, TypeScript, JavaScript, C++, C

Cloud & DevOps: AWS (Lambda, CDK, S3, EventBridge, boto3, Amazon Connect), Azure (Azure AI, Functions, ADLS Gen2), Docker

Data & Stores: Vector Databases, MongoDB, MySQL, SQL, Apache Spark, Microsoft Fabric

Tools & Collaboration: Git, GitLab, Jira, Confluence, REST APIs, Postman

Experience

CGI

Jul. 2025 - Present

Software Engineer

- Designed and deployed enterprise **Agentic AI** solutions integrating **Azure AI Foundry**, Cognigy, Genesys and AWS services to automate customer-support workflows and improve operational efficiency.
- Developed scalable **multi-agent AI workflows** enabling autonomous, context-aware task execution across support operations, reducing manual intervention and improving SLA compliance.
- Built production **LLM applications** — AI-powered call summarization and automated QA evaluation over **40,000+ calls** — using **Azure OpenAI**, RAG pipelines and enterprise knowledge bases.
- Implemented end-to-end **Infrastructure-as-Code** with **AWS CDK (TypeScript)** to provision complete **Amazon Connect** environments, enabling scalable, automated contact-center deployments.
- Delivered in an **Agile** team, using **Jira** for sprint planning and **Confluence** for documenting agent workflows, prompts and evaluation methodology.

Indian Institute of Science (IISc), Bangalore

May. 2024 - July. 2024

Research Intern

- Investigated **LLM pruning** for GPT-2; profiled with Intel VTune and optimized attention/feed-forward layers for a **4x speedup** in attention execution and a **34.8% cut in memory bandwidth** usage.

Projects

AI Governance Platform | *Azure AI Foundry, CrewAI, Google ADK, Langfuse, AgentOps*

[GitHub](#)

- Developed an enterprise AI Governance Platform for **multi-agent workflows** using Azure AI Foundry, Google ADK, CrewAI and Agent Gateway for secure orchestration of LLM agents.
- Integrated **Langfuse** and **AgentOps** for end-to-end agent observability — prompt tracing, KPI monitoring, latency analysis and production evaluation.
- Implemented **Responsible-AI controls**: prompt-injection prevention, sensitive-data masking, virtual API isolation, policy enforcement and secure tool execution.

Automated QA Evaluation | *Azure OpenAI, RAG, Azure Functions*

[GitHub](#)

- Designed and deployed an **LLM-powered QA Evaluation Platform** on Azure AI Foundry, Azure OpenAI, Azure Functions and REST APIs to auto-evaluate support calls against predefined quality metrics.
- Built **RAG pipelines** over enterprise knowledge-base documents using vector search and embeddings for context-aware assessment and reduced hallucinations.
- Automated evaluation for **40,000+ calls at 99% coverage**, enabling scalable AI-driven QA and faster agent feedback cycles.

Blog Generation & Chat-with-PDF (GenAI) | *Llama 2, Streamlit, Python*

[GitHub](#)

- Built a generative-AI web app that produces topic blogs and enables chat over PDFs (summarization, Q&A) using Llama 2, Streamlit and NLP libraries with a retrieval-based interface.

Research Publications

- IEEE COMSNETS 2026:** FAPL-DM-BC — Blockchain-backed Federated Learning with dual-model XAI for IoVs.
- IEEE FNWF 2025:** Enhancing IoT Network Security through Adaptive Curriculum Learning and XAI.
- IEEE FNWF 2025:** FedGuard-IIoT — Scalable Federated Learning for Network-IDS in Industrial IoT.
- IEEE SPACE 2025:** Predicting Stellar Metallicity — Comparative Regression Models for Solar-Twin Stars.

Achievements

- TCS TechBytes:** Dharwad Regional Finals Runner-Up (TCS & BITES, Karnataka). | **AP State Board Topper:** 990/1000.
